PropertyView, Reduce Costs And Enhance Your Risk Understanding

PropertyView uses artificial intelligence to deliver key building characteristics from satellite imagery to enrich data and improve decision-making for insurers

PropertyView from Geospatial Insight uses artificial intelligence and scalable cloud computing to extract critical building information from satellite imagery.

PropertyView delivers new insights and enriched data to help insurers, reinsurers and brokers better understand the characteristics associated with individual properties or large portfolios. By supplementing and enhancing traditionally incomplete or inaccurate data, PropertyView provides (re)insurers with a more comprehensive understanding of a property or portfolio's risks, supporting more confident risk selection and more accurate pricing and coverage.

Benefits For Insurers And Brokers...

- ✓ **Globally scalable**, rapidly deployable and affordable
- ✓ Empowers underwriters to **proactively analyse risk** associated with a property or portfolio
- ✓ **Improve pricing accuracy** and ensure correct coverage
- ✓ **Significantly reduce the costs involved** with manually assessing the validity of client/agent/broker provided information
- ✓ **Improve the accuracy** of risk and catastrophe modeling with granular data down to the property level
